This bizarre optical illusion dance is way more fun than it should be

ROBERT T. GONZALEZ

6/20/13 7:40am

It's the folk-rock polka music that really makes it.

What's most impressive about this illusion is how it manages to trick your brain, even after you've worked out the whole split-body, black-and-white outfit situation that makes it work. Try as you might, and conscious of the gimmick though you may be, it's more or less impossible to watch without lapsing back into the illusion.

As Susana Martinez-Conde, laboratory directors at the Barrow Neurological Institute, puts it: "our visual system insists in grouping adjacent body parts by color (and congruent motion)."

Plus, like we said, there's the folk-rock polka music. Which adds a whole extra layer to the hypnotic nature of the experience.

What are your feelings on anti-shake filters on a vertical-shot video? 6/20/13 1:45pm

Whenever I've noticed anti-shake filters, I've been nauseated by them, so the only way I won't object is if I don't know it's there in the first place. 6/20/13 1:55pm

after an hour of slapstick antics, this beautiful, quiet moment occurred:

That was brilliant. Thanks for sharing that. 6/20/13 8:01am
