

Science News: "Blinded By Magic"

Posted by Magic Tony at 4/11/2009 01:41:00 PM

The cover story of the most recent edition of *Science News* is a discussion of how neuroscientists (and psychologists) are increasingly turning to magic as a means to understand the processes underlying perception, attention, and even consciousness. Researchers Susana Martinez-Conde and Stephen Macknik from Phoenix's Barrow Neurological Institute (who have penned a number of great review articles on the topic of magic and neuroscience) were interviewed for the article, as was magician and psychologist Gustav Kuhn who was previously cited in my talk, "The Eyes Have It." It's an entertaining read...and open-access to boot!

Science News: Specialis Revelio!

Semi-daily news and gossip on the worlds of magic and psychology brought to you from Magic Tony's secret lair in ASU's Memory & Language Lab.

About Me

Magic Tony
Magician, student of cognitive psychology, & skeptic living in Scottsdale, AZ.
