Researchers At Barrow Neurological Institute Resolve 40& 45 year Eye Movement, Visibility Controversy

date: Jan 21st 2006 14:05

Ads by Goooooogle

For more than 40 years, a scientific controversy has raged over whether microsaccades, rapid eye movements that occur when a person s gaze is fixated, are responsible for visibility. Research conducted at Barrow Neurological Institute in Phoenix has recently resolved the debate, establishing that microsaccades are indeed responsible for driving 80 percent of our visual experience... click link for more info.
