Barrow scientists solve 200-year-old scientific debate involving visual illusions

Neuroscientists at Barrow Neurological Institute at St. Joseph's Hospital and Medical Center have discovered a direct link between eye motions and the perception of illusory motion that solves a 200-year-old debate.

Stephen Macknik, PhD, director of the Laboratory of Behavioral Neurophysiology; Susana Martinez-Conde, PhD, director of the Laboratory of Visual Neuroscience; Xoana G. Troncoso, PhD; and Jorge Otero-Millan; conducted a study based on the Enigma painting, a visual illusion in which rotational motion is seen within a stationary image. The artwork has been at the center of a debate over whether the brain or the eye is behind the perception of illusory motion.

Dr. Martinez-Conde's laboratory recently discovered that microsaccades, a small, unconscious eye movement that occurs when humans fixate their eyes, are critical to normal vision. The team of scientists conducted the Enigma study to see if microsaccades are also behind the perception of this illusion. Based on their study, the hypothesis suggesting the illusion originates solely in the brain was ruled out.

Participants in the study observed the Enigma illusion while their eye movements were simultaneously recorded with high precision cameras. Microsaccade rates increased before the illusory motion sped up and decreased before the motion slowed, revealing a direct link between the eye movements and the illusion.

"We have discovered that this illusion originates with eye movements and not solely the brain as previously thought," says Dr. Martinez-Conde. "The findings from the study could help design future prosthetics for patients with brain damage or brain lesions that affect the perception of motion."

Congressional health-care reform proposals would offer coverage to many without insurance

09.01.2009 | 13:06

category: EDUCATION : Science

Congressional health-care reform proposals would offer coverage to many without insurance Plan to cover the uninsured through Medicare reduces health-care spending by \$58 billion in 2010; Individual requirement to have insurance necessary to achieve universal coverage New York, NY, January 9, 2009—With health reform high on the agenda of the incoming Congress and President, a new analysis of legislative proposals—including the plans of President-elect Barack Obama and Senate Finance Committee Chairman Max Baucus (D-MT)—shows that several...

Mosquitoes create harmonic love song before mating, study finds

09.01.2009 | 13:06

[category](#): EDUCATION : Science

Mosquitoes create harmonic love song before mating, study finds ITHACA, N.Y. – That pesky buzz of a nearby mosquito is the sound of love, scientists have known for some time. But a new Cornell study reports that males and females flap their wings and change their tune to create a harmonic duet just before mating.
